

Mobile Operational Suite

Airpoint's tracking, surveillance and event management solution

Overview

Developed with assistance from UK police force surveillance teams, Airpoint's Mobile Operational Suite ("MOS") provides a highly visual, integrated tracking, surveillance and operational management tool. Regardless of the type of activity for which your staff are mobilised, it is imperative that their Control Centre has detailed knowledge of front line conditions so that effective command decisions can be made. Using Airpoint's MOS, the Control Centre can track all staff simultaneously through their BlackBerry® devices, and view snapshots of what they are seeing taken from the frontline. Images which can then be circulated to other active frontline staff at the click of a button using MOS's fully auditable briefing tool. MOS is the ideal solution for planning, running and analysing surveillance operations and events.

Features and Benefits

- Simultaneous, remote, multi-person access to the same operational workspace to facilitate pre-event planning, on-going event management and post-event analysis
- GPS tracking of staff throughout the event (including a facility to monitor and manage remaining battery charge) increases the safety and effectiveness of frontline staff
- All staff are able to share the same initial briefing documents simultaneously, as well as receiving one click briefing updates throughout the operation, reducing the risk of mis-identification of suspects or operational errors
- Geo-coded, time-stamped, annotated photos sent from the BlackBerry® device to the operational workspace improving Control Centre situational awareness and command decisions in sensitive or dangerous situations
- Incorporate fixed or mobile CCTV links on the workspace to provide additional situational awareness
- Log of management decisions retained on the system supplements post event analysis
- Ability to view other active staff locations and proximities on the BlackBerry® browser, improves confidence of staff in potentially dangerous situations
- Geo-fencing supported to provide remote surveillance, or logged confirmation that an employee has visited a given location

Airpoint specialises in developing tailored mobile solutions that deliver maximum efficiency for distributed workforces. For more information, please visit us at www.airpoint.net.
