

Mobile CSI

Overview

Mobile CSI is part of **Airpoint's Mobile Policing Suite (MPS)** of applications which has been designed and developed by working closely with forces throughout the UK.

Data collected at the scene of a crime is currently recorded on paper, then input into SOCRATES back at the station. This is both inefficient and delaying the information being available to other officers.

Features

- Linked to SOCRATES with instantaneous data updates
- Collates and maintains forensics about the crime and the scene details
- Includes MO details
- Allows for a skeleton case to be quickly and easily created
- Enter and search by property and/or vehicles
- Can be linked to other Scene of Crime applications

Key Benefits

- Allows officers to efficiently record information directly into SOCRATES and move onto the next case
- SOCRATES instantly updated so the data about a suspect is available to other officers within minutes
- Eliminations quickly recorded and made available to other officers

Airpoint specialises in developing tailored mobile solutions that deliver maximum efficiency for distributed workforces. For more information, please visit us at www.airpoint.net.
