

Neighbourhood Monitoring

Overview

Neighbourhood Monitoring is part of **Airpoint's Mobile Policing Suite (MPS)** of applications which has been designed and developed by working closely with forces throughout the UK.

In order to quell the mounting fear of crime in communities, visibility and interaction with an approachable local police force is vital. Completing questionnaires with the Key Individual Network (KIN) is currently completed in paper format which requires re-keying into the central database at the station. A mobile solution is an easy way to eliminate this inefficiency with possible errors and allow officers to interact more freely and more often with citizens.

Features

- User defined questionnaires
- Includes impact level assessments
- Immediate recording of citizen's answers for collation and action
- Links to Key Individual Network (KIN) member database
- Supports introduction and closing scripts to ensure officers are consistent and professional

Key Benefits

- Interaction with citizens as part of the process reinforcing the visibility of the local constabulary
- Delivers consistency and professionalism
- No wasted time rekeying data -- more time spent in the neighbourhood

Airpoint specialises in developing tailored mobile solutions that deliver maximum efficiency for distributed workforces. For more information, please visit us at www.airpoint.net.
