

# Mobile Policing Suite

Airpoint's **Mobile Policing Suite (MPS)** is a collection of complementary applications which have been specifically designed to tackle three key challenges currently facing the police service

- Increase police presence in the community
- Increase officer efficiency
- Increase capability for officers to receive real-time information

Airpoint has worked closely with both the police forces and national agencies such as the NPIA in order to understand the unique requirements of the sector. This cooperative approach has resulted in the comprehensive solution set.

Whilst the solution has been extremely successful within forces that have it deployed, we realise that new methods and ideas to further improve the way in which officers operate are continually evolving and being put forward. As such, MPS has been designed with the flexibility that allows new modules to be added without disruption to existing applications - as your requirements evolve so does MPS.

- **Activity Management:** simplifies the process for the duty officer so that all necessary activities are scheduled, with actuals recorded by the assigned officer remotely, without the need for visiting the station
- **Crime Recording Unit (CRU) Callback:** frees up the officer to get on with other duties if they are unable to talk to the CRU by switching the obligation for task completion to the CRU centre
- **Crime Tasking:** officers remotely receive the details of allocated crime investigation and can update the record without having to visit the station
- **Encounters:** provides immediate person and vehicle identity data from multiple local and national systems which can then be re-used throughout the encounter process
- **Incident Management:** allows allocation of incidents and remotely updating officers of their duties, and subsequent remote reporting back on the outcomes
- **Management Console:** assists IT Administrators and staff by providing single point of access to all MPS component applications, allowing control of all MPS modules through one common interface
- **Mobile CSI:** collates and maintains forensics and scene data, and allows immediate update to SOCRATES of details from each attendance
- **Neighbourhood Monitoring:** allows standard questionnaires to be completed with the citizens and immediate update remotely
- **Shift Briefing:** officers receive all shift briefing details remotely, eliminating the need to start their shift at the station

Airpoint specialises in developing tailored mobile solutions that deliver maximum efficiency for distributed workforces. For more information, please visit us at [www.airpoint.net](http://www.airpoint.net).
